# The Problem

## *The Global Trust Crisis*

- **The AI Workstop Problem:** 75% of remote technical applications are now "synthetic"—AI-generated CVs and fraudulent credentials.
- **The Cost:** Companies lose 14 days per hire on manual technical screening.
- **The Gap:** Existing background checks are slow and non-technical. They can't verify "Technical Truth" in real-time.

# The Solution

*Introducing Claire*

- **Infrastructure for Human Intelligence:** Claire is an Agentic AI engine that verifies global talent in seconds, not weeks.
- **The Gatekeeper:** She provides a definitive Truth Score by auditing technical logic, identity, and experience.
- **Outcome:** 99.9% reduction in screening time with zero-trust security.

- ●
- **Explainability:** Claire exposes her internal reasoning via a live terminal feed.
- **Audit Trail:** Every decision is backed by a log of technical trade-offs (e.g., analyzing CSS vs. Bootstrap).
- **Anti-Hallucination:** By showing her work, Claire ensures the results are verifiable and secure.

Chat Message Received response: TERMINAL_CHAT:"Q1: How would you approach designing a website that needs to be ...  
Chat Message Received response: -first approach that focuses on content hierarchy and fluid layouts.\n\nQ2: How ...  
Chat Message Received response: need to build it quickly, use Bootstrap. If you need to be very specific in the ...
```

# Product Demo — Transparency Protocol

*"Thinking Out Loud" Logic*

# Key Upgrade — Secure Email Verification

- **Domain Auditing:** Instant verification of candidate email domains against global blacklists and bot-networks.
- **Fraud Detection:** Claire identifies "Identity Mules" and automated bot accounts at the entry point.
- **Integration:** Seamlessly connects to identity providers to ensure the person applying is who they say they are.

*Node 1: Identity Integrity*

# Key Upgrade — Advanced CV Audit

- **Pattern Recognition:** Claire identifies AI-generated CV patterns and hidden "keyword stuffing" invisible to humans.
- **Inconsistency Mapping:** Cross-references stated experience against real-world technical timelines.
- **Technical Truth:** Claire doesn't just read the CV; she audits it for structural integrity.

*Node 2: The Structural Deep-Dive*

# Key Upgrade — Database Integration

- **MindStudio Individual Power:** Now capable of unlimited runs and complex agentic coordination.
- **Centralized Truth:** Integrated with core HR databases (Airtable/Stripe/Slack) to store and sync verification scores.
- **Scalability:** Built to handle thousands of concurrent global verifications without latency.

*Node 3: Enterprise-Scale Intelligence*

# The Technology

*Agentic AI vs. Chatbots*

- **Proprietary Architecture:** Claire is built on a "Multi-Agent" system where specialized agents handle specific audit nodes.
- **Model Agnostic: Leveraging the best LLMs (OpenAI/Anthropic)** via MindStudio for maximum reasoning power.
- **The Moat:** Our logic isn't just a prompt; it's a proprietary Verification Workflow.

# Business Model

*Monetizing Global Trust*

- **B2B SaaS:** Tiered subscription for recruitment agencies and tech-heavy enterprises.
- **Unit Economics:** High-margin "Data Intelligence" model.
- **Scale Factor:** Built to be the "Standard Verification Layer" for global hiring platforms like Deel.

- •
- **TAM:** Global Recruitment (\$500B+).
- **SAM:** AI-Driven Verification & Background Checks (\$15B)
- **The Driver:** The shift to "Remote-First" makes real-time technical verification a mandatory utility, not a luxury.

# Market Opportunity

A \$500B Untapped Segment

# Competition

Why We Win

- **Legacy Systems:** Slow, manual, and easily fooled by AI Workstop.
- **Static Screeners:** Basic keyword matching with zero reasoning.
- **Claire:** Real-time, agentic, and transparent. We provide Audit-Ready Truth.

- **Titilayo Abidemi (Founder):** Full-Stack Developer & Cybersecurity Specialist.
- **Technical DNA:** 4+ years of experience in secure global system architecture.
- **Founder-Market Fit:** We didn't just build an AI; we built a security engine for the workforce.

# The Team

*Built by Experts*

# Traction & Roadmap

*Execution at Velocity*

- **Milestone 1:** MVP launched with "Thinking Out Loud" protocol.
- **Milestone 2 (Now):** Upgraded to Individual Plan; Integrated Email/CV/Database.
- **Next Phase (Q3 2026):** Pilot programs with logistics and tech firms in New York/London.

- **Goal:** To become the default verification layer for global hiring.
- **Use of Funds:** \*50% Product & Engineering (Sub-agent expansion).
  - 30% Market Expansion (NYC & Europe Hubs).
  - 20% Operations & Security Compliance.

# The Ask

\$1,000,000 to Scale Technical Truth

# Thank You

Let's Create Something  
Amazing Together
